To whom it may concern,

May 11, 2018

T. Weber Co. Ltd. is in the asphalt maintenance and replacement business in the Region of Waterloo. We service Kitchener, Waterloo, Guelph and Cambridge.

We are always looking for ways to improve our business. Our last improvement was to test a new product called Brake Stroke Light Indicator (BSLI). Check out the website [www.outofadjustment.com](http://www.outofadjustment.com)

This new invention is already paying off. We started using this product approximately 2 weeks ago. On May 10, 2018, one of our drivers noticed the light flashing. Each time the brakes were used, the adjustment went out just a little more until it triggered the sensor which alerted my driver there was a brake component issue.

We had the truck inspected by a mechanic that night. During this inspection, our mechanic noticed the ratchet part of the slack adjuster was failing. The steering axle right side slack adjuster was starting to fail as the ratchet was becoming weak. Without the Brake Stroke Light Indicator (BSLI) system installed, this issue could have gone undetected until there was no braking power on that wheel.

We are in the process of adding BSLI system to our fleet of dump trucks and trailers. We believe in this product and recommend everyone to try it. With Ministry of Transportation - Ontario (MTO) constantly cracking down on commercial vehicles, this is a cheap new way to stay one step ahead.

Our company goal is to operate without getting any CVOR points and personally we want to thank Kevin Falconer for his latest invention.

Should you have any questions, please contact me at **519-ASPHALT**.

Yours Truly,

Tim Weber, C.E.T.
